Get Active!

It's vital to offer children the opportunity to enjoy outdoor sports and active play. Encouraging them to have healthy bodies and minds is a key part of a good education, and the skills learned while playing together in 'the outdoor classroom' help youngsters to develop physically and emotionally.

Notts Sport's ChildsPlay® range is the original synthetic grass play surface, and it's still the best.

ChildsPlay® Active is the latest innovation in Notts Sport's popular ChildsPlay® range. Combining opportunities for sports, play and education in one space, it's a solution that's superior to many other products in this sector.

childsplay®
Active

ChildsPlay® Active inspires children to look forward to and love outdoor sport and play, while helping them to develop strength, confidence and capability.

It's a surfacing solution that's mentally and physically stimulating, with the scope to add patterns, themes, sport and games that encourage thought, exercise, social interaction and friendship.

By enriching traditional sport, play and education with a host of vibrant new ideas, ChildsPlay® Active boosts participation in healthy exercise and active learning.

Inspirational 2

Educational

Letters and numbers can be included in the surface, making playtime an opportunity to develop numeracy and literacy skills. A map of the world or a 100 square can also be used by teachers and children alike for outdoor teaching as part of Key Stages of the National Curriculum, or re-imagined by children for innovative play – either for formal lessons, or while soaring over it as a pilot or an astronaut!

Alongside exciting freeform or equipment-linked patterns, markings for conventional games such as chess and hopscotch can encourage children to challenge themselves individually or in groups.

3

The ChildsPlay® surface is also proven as a truly multi-sport surface capable of supporting football, hockey, tennis and netball to recognised standards as well as informal play and games.

As the surface is so versatile, special in-laid lines can be included in the ChildsPlay® Active surface for organised games, or temporarily painted on when necessary.

To young and creative minds, during playtimes it could become an Olympic running track with gold medals to be won, Wembley Stadium on cup final day or centre court at Wimbledon, whilst offering the school a ready made sports area for teaching and coaching.

Sporting

4

5 Inclusive

By offering a higher level of inclusivity, all young people have the chance to exercise, interact and have fun together outside the classroom.

Minimal energy is needed for wheelchair users to move across the surface, which is designed to meet the North American ASTM standard (F1951-99). With no equivalent European (EN) standard yet in force, ChildsPlay® Active is ahead of the game in providing play for all in the UK.

The sensory synthetic turf of ChildsPlay® Active offers amazing potential for exploration and exhilaration, by energising children's minds and bodies.

Playful

Mounds, slopes and hollows that are already features of a play landscape can be included in the ChildsPlay® Active design, enabling children to use different movements and muscles, and to test their balance as they move around the surface.

Where the existing play landscape is flat, Notts Sport® can introduce mounds and hollows to create dynamic features – all covered by the secure-seamed synthetic turf surface – to add a new dimension to the space.

As well as being visually stimulating, the tactile synthetic turf surface feels good to the touch, encouraging children to run, sit and roll upon it while feeling safe and secure in their very own play space.

6

Colourful

7

Available in 15 colours,
a ChildsPlay® Active surface can
include endless patterns and shapes to be
as vibrant and animated as your design requires
– and gives a unique opportunity to appeal to
children's huge sense of fun and adventure. Colours
can also be used to highlight lines, goals and centre
circles for different sports.

Notts Sport® can offer expert advice on creating an
area using ready-made patterns and innovative
designs for play and sport– or bespoke ideas can
be brought to life using the latest laser
technology.

ChildsPlay® Active offers the widest possible colour range, ensuring this is a solution that suits every installation, whether in an urban or a rural setting.

The porous design of the synthetic turf surface makes puddles a thing of the past and provides a facility that can be used even after heavy rain.

And while it costs no more than many other surfacing products, ChildsPlay® Active has proven to be a long-lasting option, with stronger seams ensuring less maintenance is needed over its lifetime – and it comes with the reassurance of a seven-year warranty.

By choosing this unique solution, you'll also benefit from Notts Sport's 'at risk' project management and design service, available at no upfront cost so that you can be sure you've chosen the perfect scheme before making an investment.

Plus, full quality control is assured throughout the installation of ChildsPlay® Active: Notts Sport® only ever uses its approved network of trained, qualified distributors – and because it's designed for quick and easy installation, disruption to school or nursery life is minimised.
